

# METALOSATE® IRON

## Amino Acid Chelate Soluble Powder Foliar Fertilizer

Approved for  
**ORGANIC**  
Production

### GUARANTEED ANALYSIS:

Total Nitrogen (N) .....	3.4%
3.4% water soluble organic nitrogen	
Iron (Fe).....	15.0%

### Derived from Iron Amino Acid Chelate

### GENERAL INFORMATION:

Amino acid chelated **Metalosate® Iron** soluble powder is designed for foliar application on plants to prevent or correct nutrient deficiencies that may limit crop growth and yields. It is water soluble and nontoxic to plants when applied as directed. For best results, apply **Metalosate® Iron** soluble powder according to recommendations based on plant tissue or soil analysis.

### DIRECTIONS:

Apply by a spray method and in an adequate amount of water that will provide complete coverage of the plants. Use of a non-ionic wetting agent may improve spray coverage of certain hard to wet plants.

**Metalosate® Iron** soluble powder can be included in a regular spray program on crops. Consult with an **Albion®** representative on compatibility with other spray materials.

The rate of application will depend on the crop, stage of growth, and severity of deficiency. The maximum recommended rates are for mature, full-sized plants. Reduce the rates proportionately when spraying smaller plants.

**Metalosate® Iron** soluble powder may be used on legumes, grain crops, root crops, cucurbits, cole crops, leafy vegetables, woody and herbaceous ornamentals, deciduous fruits, vine crops, tropical and subtropical fruits, and many other crops.

### RECOMMENDATIONS:

**Field Crops and Vegetables:** Apply 0.6 to 1.2 kg per hectare during periods of rapid growth or nutritional stress. The application may be repeated 2 or more times through the growing season.

**Tree Crops:** Make an application of 0.6 to 1.7 kg per hectare after the beginning of active growth. The application may be repeated at 2 to 4 week intervals through the growing season.

**Grapes and Berries:** Make an application of 0.6 to 1.2 kg per hectare after active growth begins. The application may be repeated at intervals of one week or more through the vegetative-growth period.
